

Figure showing morphological traits (Body\_Mass, Jaw\_Protrusion\_Distance, Adductor\_Mandibulae\_Mass, M. sternohyoideus\_Mass, Fifth\_Geratobranchial\_Mass) for various fish species. The traits are measured on a scale from -2.69 to 1.64 (Body\_Mass), 0.2 to 3.25 (Jaw\_Protrusion\_Distance), 0.0 to 0.8 (Adductor\_Mandibulae\_Mass), 0.0 to 0.8 (M. sternohyoideus\_Mass), and 0.0 to 3.68 (Fifth\_Geratobranchial\_Mass).
